Designation: B271/B271M – 23

Standard Specification for Copper-Base Alloy Centrifugal Castings[1]

This standard is issued under the fixed designation B271/B271M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This specification covers requirements for centrifugal castings of copper-base alloys having the nominal compositions shown in Table 1.

1.2 The values stated in either SI units or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems may result in non-conformance with the standard.

1.3 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

2.1 The following documents in the current issue of the Book of Standards form a part of this specification to the extent referenced herein:

2.2 *ASTM Standards:*[2]

B208 Practice for Preparing Tension Test Specimens for Copper Alloy Sand, Permanent Mold, Centrifugal, and Continuous Castings

B824 Specification for General Requirements for Copper Alloy Castings

B846 Terminology for Copper and Copper Alloys

E10 Test Method for Brinell Hardness of Metallic Materials

2.3 *ASME Code:*[3]

Boiler and Pressure Vessel Code

3. Terminology

3.1 Definitions of terms relating to copper alloys can be found in Terminology B846.

4. Ordering Information

4.1 Orders for centrifugal castings under this specification should include the following information:

4.1.1 Specification title, number, and year of issue;

4.1.2 Quantity (length or number) of castings;

4.1.3 Copper Alloy UNS Number (Table 1) and temper (as-cast, heat-treated, and so forth);

4.1.4 Dimensions or drawing number and condition (as-cast, machined, and so forth);

4.1.5 *ASME Boiler and Pressure Vessel Code* requirements (Section 9); and

4.1.6 When castings are purchased for agencies of the U.S. Government, the Supplementary Requirements in Specification B824 may be specified.

4.2 The following are optional and should be specified in the purchase order when required:

4.2.1 Pressure test or soundness requirements (Specification B824),

4.2.2 Approval of weld repair (Section 8),

4.2.3 Certification (Specification B824),

4.2.4 Foundry test report (Specification B824),

4.2.5 Witness inspection (Specification B824),

4.2.6 Product marking (Specification B824), and

4.2.7 Castings for seawater service (Section X1.2).

5. Materials and Manufacture

5.1 Castings in Copper Alloy UNS No. C95520 are used in the heat-treated condition only.

5.2 For improved corrosion resistance for sea water applications, castings of Copper Alloy UNS No. C95800 may be given a temper anneal heat treatment at 1200 °F to 1300 °F [650 °C to 705 °C] for 6 h minimum. Cooling shall be by the fastest means possible that will not cause excess distortion or racking. Propeller castings shall be exempt from this requirement.

6. Chemical Composition

6.1 The centrifugal castings shall conform to the chemical requirement shown in Table 2 for the Copper Alloy UNS Numbers specified in the purchase order.

[1] This specification is under the jurisdiction of ASTM Committee B05 on Copper and Copper Alloys and is the direct responsibility of Subcommittee B05.05 on Castings and Ingots for Remelting.

Current edition approved Oct. 1, 2023. Published October 2023. Originally approved in 1954. Last previous edition approved in 2018 as B271/B271M – 18. DOI: 10.1520/B0271_B0271M-23.

	C97800	25 % leaded nickel silver	66	5	2	2	25	...	...	...	...

[A] Phosphorus 0.13

6.2 These specification limits do not preclude the presence of other elements. Limits may be established and analysis required for unnamed elements agreed upon between the manufacturer or supplier and the purchaser. Copper or zinc may be given as remainder and may be taken as the difference between the sum of all elements analyzed and 100 %. When all named elements in Table 2 are analyzed, their sum shall be as specified in Table 3.

7. Mechanical Properties

7.1 Mechanical properties shall be determined from test bar castings cast in accordance with Practice B208 and shall meet the requirements shown in Table 4.

8. Weld Repair

8.1 The castings shall not be weld repaired without customer approval.

9. ASME Requirements

9.1 When specified in the purchase order to meet *ASME Boiler and Pressure Vessel Code* requirements castings in Copper Alloy UNS Nos. C95200 and C95400 shall comply with the following:

9.1.1 Certification requirements of Specification B824.

9.1.2 Foundry test report requirements of Specification B824.

9.1.3 Castings shall be marked with the manufacturer’s name, the Copper Alloy UNS No., and the casting quality factor. In addition, heat numbers or serial numbers that are traceable to heat numbers shall be marked on all pressure-containing castings individually weighing 50 lb [22.7 kg] or more. Pressure-containing castings weighing less than 50 lb [22.7 kg] shall be marked with either the heat number or a serial number that will identify the casting as to the month in which it was poured. Marking shall be in such a position as to not injure the usefulness of the casting.

10. General Requirements

10.1 The following sections of Specification B824 form a part of this specification. In the event of a conflict between this specification and Specification B824, the requirements of this specification shall take precedence.

10.1.1 Terminology;

10.1.2 Other Requirements;

10.1.3 Dimensions, Mass, and Permissible Variations;

10.1.4 Workmanship, Finish, and Appearance;
