

Designation: D4725 – 15 (Reapproved 2023)

Standard Terminology for Engine Coolants and Related Fluids¹

This standard is issued under the fixed designation D4725; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This document covers terminology relating to engine coolants. It is intended to provide a reference for anyone seeking information on engine coolants, and also to provide a uniform set of definitions for use in preparing ASTM specifications, test methods and other standard documents.

1.2 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.3 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

[D3306 Specification for Glycol Base Engine Coolant for Automobile and Light-Duty Service](#)

[D3585 Specification for ASTM Reference Fluid for Coolant Tests](#)

[D4985 Specification for Low Silicate Ethylene Glycol Base Engine Coolant for Heavy Duty Engines Requiring a Pre-Charge of Supplemental Coolant Additive \(SCA\)](#)

[D6210 Specification for Fully-Formulated Glycol Base Engine Coolant for Heavy-Duty Engines](#)

[D6471 Specification for Recycled Prediluted Aqueous Glycol Base Engine Coolant \(50 Volume % Minimum\) for](#)

[Automobile and Light-Duty Service \(Withdrawn 2019\)³](#)
[D6472 Specification for Recycled Glycol Base Engine Coolant Concentrate for Automobile and Light-Duty Service \(Withdrawn 2019\)³](#)

[E1177 Specification for Engine Coolant Grade Glycol](#)

2.2 *ISO Standard:*

[ISO 22241 Diesel engines - NOx reduction agent AUS 32](#)

3. Terminology

antifoam, *n*—a substance added to engine coolant concentrate, corrosion inhibitor packages, or supplemental coolant additives to prevent or suppress foam.

DISCUSSION—Eliminating foam improves heat transfer.

antifreeze, *n*—a term frequently used in the marketplace for engine coolant concentrate. (See **engine coolant concentrate**.)

antirust, *n*—an inhibitor package, solid or liquid, intended to be diluted with water or glycol for use in an engine cooling system to mitigate rust and corrosion.

ash content, *n*—the residue from an engine coolant concentrate, antirust, or engine coolant that remains after evaporation, charring, and ignition at strong heat.

boiling point, *n*—the temperature at which the vapor pressure of an engine coolant reaches atmospheric pressure under equilibrium boiling conditions.

cavitation corrosion, *n*—a form of localized, accelerated corrosion characterized by deep pitting and caused by high mechanical forces resulting from coolant vapor bubble collapse at the surface of the metal.

cavitation erosion corrosion, *n*—the mechanical removal of protective films on metal by the formation and collapse of vapor bubbles in a liquid, and the abrasive action of a liquid, which may contain suspended solids, moving at high velocity.

DISCUSSION—The mechanical removal of the protective films exposes fresh metal to corrosive attack.

¹ This terminology is under the jurisdiction of ASTM Committee D15 on Engine Coolants and Related Fluids and is the direct responsibility of Subcommittee D15.92 on Terminology.

Current edition approved Sept. 1, 2023. Published September 2023. Originally approved in 1987. Last previous edition approved in 2015 as D4725 – 15. DOI: 10.1520/D4725-15R23.
