

Designation: E726 – 01 (Reapproved 2021)

Standard Test Method for Particle Size Distribution of Granular Carriers and Granular Pesticides¹

This standard is issued under the fixed designation E726; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This test method is used to determine the particle size distribution of granular carriers and granular pesticides.

1.2 The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.* For specific hazard statements, see Section 6.

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

E725 Test Method for Sampling Granular Carriers and Granular Pesticides

3. Summary of Test Method

3.1 A known weight of the granular carrier or granular pesticide is placed on the top sieve of a stacked set of U.S. standard sieves and shaken under standard conditions for a

specified period of time. The weight percent of the granules retained on each sieve and the bottom pan is determined.

4. Significance and Use

4.1 This procedure was designed principally for clay, corncob, nut shell, paper, or sand granular carriers and granular pesticide products, but need not be limited to these materials. There may be more appropriate test methods for other types of granular carriers and products.

5. Apparatus

5.1 *Brushes*; Tyler Part No. 8576 soft brass wire brush, or equivalent, for 100 mesh (150 μ m) and coarser sieves. Tyler nylon bristle brush (Part No. 8577), or equivalent, for screens finer than 100 mesh.

5.2 *Mechanical Sieve Shaker*; a Tyler RoTap sieve shaker, or equivalent, or other agreed upon device.

5.3 *Sieves*; U.S. standard 8 in. (20.3 cm) diameter sieves, or equivalent, conforming to Specification **E11**.

5.4 *Bottom Receiver Pan and Top Sieve Cover*.

5.5 *Interval Timer*; adjustable, with an accuracy of ± 10 s.

5.6 *Balance*; sensitivity of 0.1 g.

6. Hazards

6.1 Before testing, read the precautionary statements on the product label, and the Material Safety Data Sheet, or both. Take proper precautions to prevent skin contact and inhalation of the fines, or the vapors, or both. Take care to prevent contamination of the surrounding area. Always wear the appropriate safety equipment and, where indicated, wear respiratory devices approved by NIOSH for the product being tested.

7. Procedure

7.1 Clean and stack the specified sieves in order of size with the pan on the bottom, and the sieve with the largest mesh on the top.

7.2 Use a representative sample of approximately 100 ± 5 g as defined in Test Method **E725**.

7.3 Weigh the sample to ± 0.1 g.

¹ This test method is under the jurisdiction of ASTM Committee **E35** on Pesticides, Antimicrobials, and Alternative Control Agents and is the direct responsibility of Subcommittee **E35.22** on Pesticide Formulations and Delivery Systems.

Current edition approved Oct. 1, 2021. Published October 2021. Originally approved in 1980. Last previous edition approved in 2015 as E726 – 01 (2015). DOI: 10.1520/E0726-01R21.
