THIS BRITISH STANDARD, having been approved by the Mechanical Engineering Industry Standards Committee and endorsed by the Chairman of the Engineering Divisional Council, was published under the authority of the General Council on 19th August, 1964.

The information in this British Standard has been extracted from American Standard Class 5 Interference-fit thread (ASA B1.12-1963), with the permission of the publisher, The American Society of Mechanical Engineers, United Engineering Centre, 345 East 47th St., New York 17, N.Y.

The Institution desires to call attention to the fact that this British Standard does not purport to include all the necessary provisions of a contract.

In order to keep abreast of progress in the industries concerned, British Standards are subject to periodical review. Suggestions for improvements will be recorded and in due course brought to the notice of the committees charged with the revision of the standards to which they refer.

A complete list of British Standards, numbering over 6000, fully indexed and with a note of the contents of each, will be found in the British Standards Yearbook, which may be purchased from BSI Sales Department. It may also be consulted in many public libraries and similar institutions.

This standard makes reference to the following British Standard:

B.S. 1768. Unified precision hexagon bolts, screws and nuts (UNC and UNF threads). Normal series.

*British Standards are revised, when necessary, by the issue either of amendment slips or of revised editions. It is important that users of British Standards should ascertain that they are in possession of the latest amendments or editions.*

The following B.S.I. references relate to the work on this standard:  
Committee references MEE/60 and MEE/60/8.
