7. Hard grade bitumens	1		

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Foreword

This Part of this British Standard has been prepared under the direction of the Road Engineering Standards Committee.

It has now been decided to incorporate all types of bitumen for building and civil engineering in a fully revised edition of BS 3690 as follows.

- BS 3690 Bitumens for building and civil engineering
- Part 1. Specification for bitumens for road purposes
 - Part 2. Specification for bitumens for industrial purposes
 - Part 3*. Specification for bitumen mixtures

Part 2 is an entirely new standard based on normal practice in the UK and relates only to the climate, conditions and application techniques encountered here. It specifies the properties known to be important and the relevant test methods.

This standard covers all grades of bitumen for industrial applications. It is not intended that this standard should include bitumens having special rheological and/or chemical properties for certain applications. It is recognized that there are many industrial applications for bitumen and any additional requirements for specific applications should be agreed between purchaser and supplier.

It is not the function of this Part of this standard to specify which grades of bitumen should be used for individual applications. Appropriate British Standard specifications and codes of practice are BS 534, BS 743, BS 747, BS 988, 1076, 1097, 1451, BS 1162, 1410, 1418, BS 1858, BS 1863, BS 2499, BS 2832, BS 3416, BS 3634, BS 4147, BS 5493, CP 102, CP 144 and CP 2010.

*In course of preparation.
