
British Standard Specification for

Digital data transmission

Part 7. Basic mode control procedures; conversational information message transfer

Spécification relative à la transmission de données numériques

Partie 7. Procédures de commande en mode de base;
transfert des messages d'information de conversation

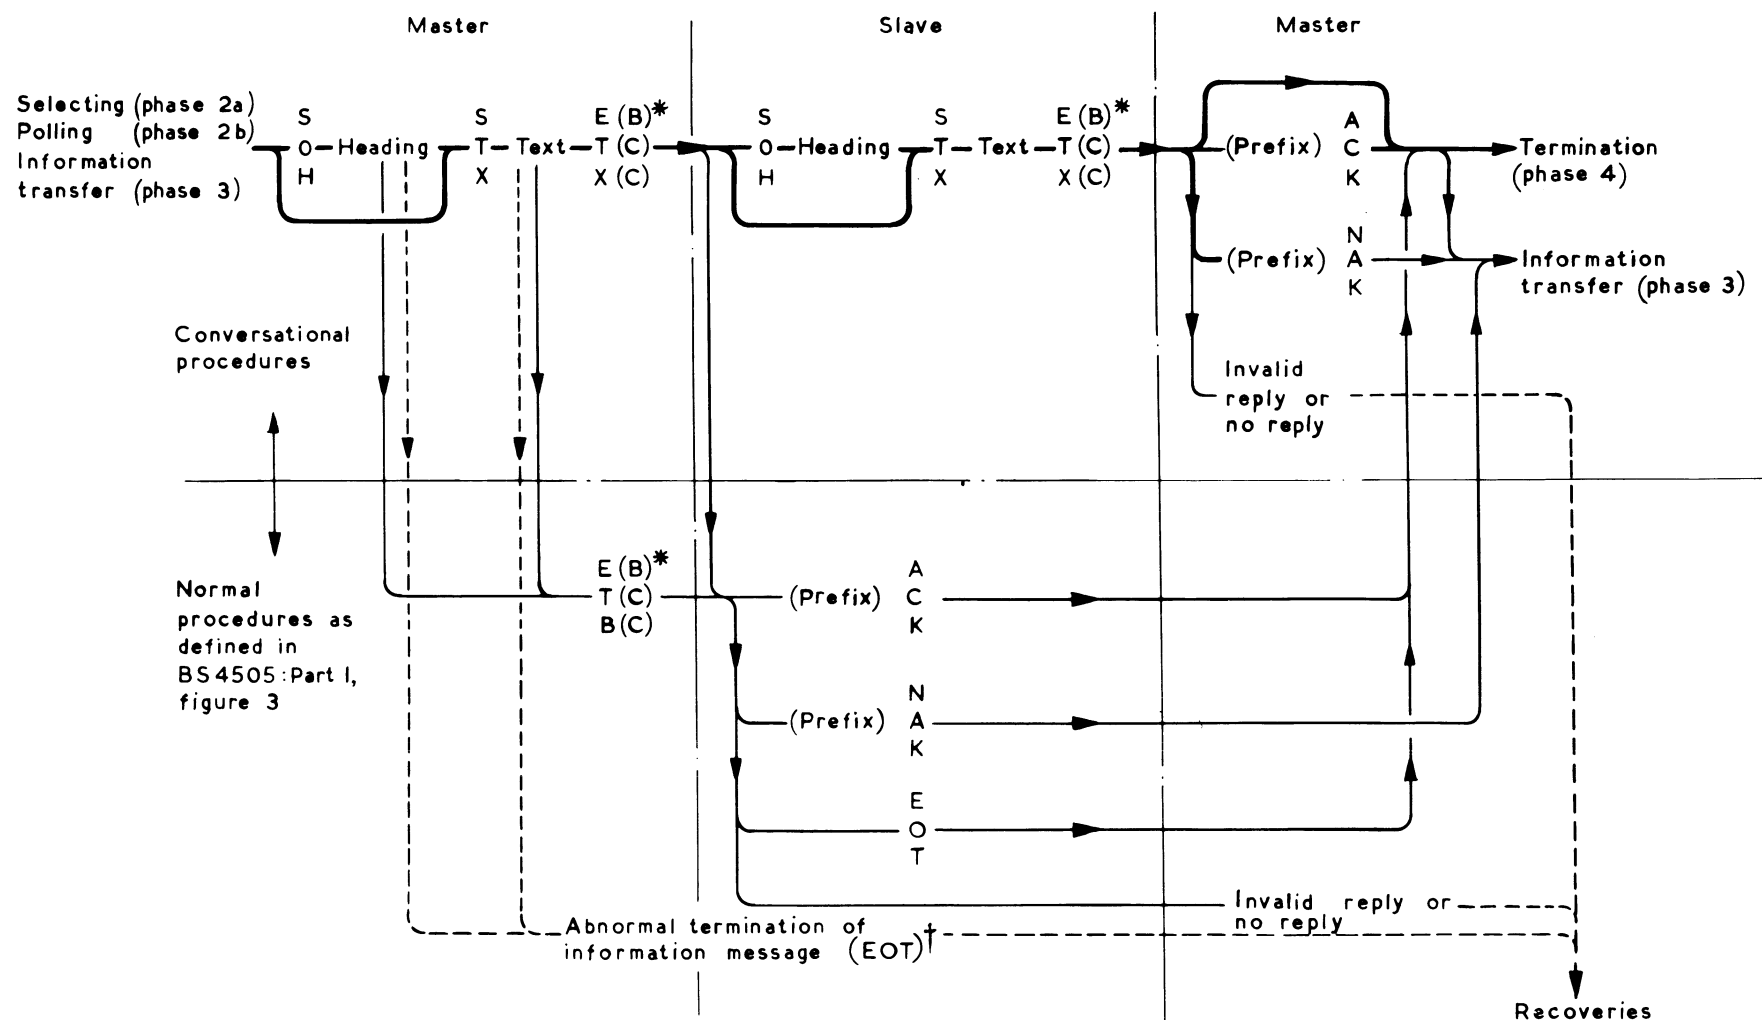

Spezifikation für Digitaldatenübertragung

Teil 7. Elementare Steuerprozeduren; Dialogbetrieb

Foreword

This Part of this British Standard has been prepared under the authority of the Data Processing Standards Committee. It is based on International Standard ISO 2629.

It is an extension of BS 4505 : Part 1 and allows for the reversal of information transfer while remaining within phase 3 of the basic mode (information transfer phase). This type of application is particularly adaptable to enquiry response systems.

* BCC is optional.

† EOT can abort at any point in the transfer phase.
