National foreword

This Part of BS 4585, which has been prepared under the direction of the Food and Agriculture Standards Committee, is identical with ISO 5567:1982 'Dehydrated garlic — Determination of volatile organic sulphur compounds'. The international standard was prepared by Subcommittee 7, Spices and condiments, of Technical Committee 34, Agricultural food products, of the International Organization for Standardization (ISO).

Terminology and conventions. The text of the international standard has been approved as suitable for publication as a British Standard without deviation. Some terminology and

certain conventions are not identical with those used in British Standards; attention is drawn especially to the following.

The comma has been used as a decimal marker. In British Standards it is current practice to use a full point on the baseline as the decimal marker.

Wherever the words 'International Standard' appear, referring to this standard, they should be read as 'British Standard'.

Compliance with a British Standard does not of itself confer immunity from legal obligations.
