General requirements for rotating electrical machines

Part 144. Specification for the insulation of bars and coils of
high voltage machines, including test methods

Règles générales pour les machines électriques tournantes

Partie 144. Isolation des barres et des bobines des machines à haute tension et méthodes d'essai —
Spécifications

Allgemeine Anforderungen an umlaufende elektrische Maschinen

Teil 144. Isolierung von Wicklungsstäben und Spulen von Hochspannungsmaschinen
einschließlich Prüfverfahren

Contents

	Page		Page
Foreword	Inside front cover	Section three. Tests on windings cured in the stator	
Committees responsible	Back cover	6 Test of conductor lamination insulation	3
Specification		7 Test of the winding	3
Section one. General		8 Tests on corresponding single winding elements	3
1 Scope	1	Tables	
2 Reference	1	1 Number of bars or coil sides to be tested	1
Section two. Tests on conductor bars and coils		2 Highest permissible values of loss tangent (rated voltage not exceeding 11 kV)	2
3 Tests	1	Figure	
4 Routine test	1	1 Curve of tan delta against the ratio U/U_n (example of a series of measurements)	2
5 Random test	2		

Foreword

This Part of BS 4999 has been prepared under the direction of the Power Electrical Engineering Standards Committee and supersedes BS 4999 : Part 61 : 1977, which is withdrawn.

This Part has been issued to implement the decision to renumber all the Parts of BS 4999 to bring the Part numbers more into line with those of IEC Publication 34.

In addition to the renumbering of the Part, the inclusion of the Part number in the point numbering system, adopted in Part 61, has been abandoned. No technical changes have been made to the text of BS 4999 : Part 61 : 1977.

This Part of BS 4999 implements CENELEC* Harmonization Document HD 345.

Compliance with a British Standard does not of itself confer immunity from legal obligations.
