

Specification for

Nylon tubing

Part 2. Plasticized and unplasticized nylon tubing
types 11 and 12 for use primarily in
the automobile industry

Spécification des tubes en nylon

Partie 2. Tubes en nylon plastifié et non-plastifié, types 11 et 12,
à utiliser surtout dans l'industrie automobile

Spezifikation für Nylonrohre

Teil 2. Plastizierte und nicht plastizierte Nylonrohre, Typen 11 und 12,
mit Hauptverwendung in der Automobilindustrie

British Standards Institution

Specification

1. Scope	1
2. References	1
3. Material	1
4. Designation of tubing	1
5. Dimensions	1
6. Design criteria for safe maximum working pressures, minimum installation radii and short-time burst pressure	3
7. Physical characteristics	6
8. Special requirements for heat and light stability	6
9. Resistance to liquids	6
10. Frequency of testing	6
11. Marking	7

Appendices

A. Methods of conditioning tubing and moulded test sheets prior to testing	8
B. Method for the determination of melting point	8
C. Method for the determination of burst pressure	8
D. Method for the determination of water absorption	8
E. Methods of heat ageing	9
F. Method for falling weight testing	9
G. Method for the determination of low temperature flexibility	10
H. Method for the determination of the effect of artificial exposure	10
J. Method for the determination of the change in tensile properties due to immersion in liquids	10
K. Method for the determination of the permeability to fuel	11
L. Method for the determination of the change in volume due to immersion in liquids	11
M. Method for the determination of the resistance to sulphuric acid of density 1275 kg/m ³ (battery acid)	12
N. Method for the determination of the resistance to zinc chloride solution	12
P. Method for the determination of the resistance to brake/clutch fluid	12
Q. Method for the determination of the resistance to methanol	12

Tables

1. Physical requirements for material	1
2. Tubing dimensions: light duty grade	2
3. Tubing dimensions: medium duty grade	2
4. Tubing dimensions: heavy duty grade	3
5. Safe maximum working pressure at various temperatures, and minimum installation radius: light duty grade of plasticized nylon tubing	3
6. Safe maximum working pressure at various temperatures, and minimum installation radius: medium duty grade of plasticized nylon tubing	4
7. Safe maximum working pressure at various temperatures, and minimum installation radius: heavy duty grade of plasticized nylon tubing	4
8. Safe maximum working pressure at various temperatures, and minimum installation radius: light duty grade of unplasticized nylon tubing	4
9. Safe maximum working pressure at various temperatures, and minimum installation radius: medium duty grade of unplasticized nylon tubing	4
10. Safe maximum working pressure at various temperatures, and minimum installation radius: heavy duty grade of unplasticized nylon tubing	5
11. Pressure factors at various temperatures for plasticized and unplasticized nylon tubing	5
12. Short-time burst pressure for plasticized nylon tubing at 23 °C	5
13. Short-time burst pressure for unplasticized nylon tubing at 23 °C	5
14. Type tests	7
15. Quality control tests	7
16. Immersion times for boiling water conditioning	8
17. Slot width of falling weight apparatus	9

Foreword

This Part of this British Standard has been prepared, under the direction of the Plastics Standards Committee in consultation with the Automobile Standards Committee, to specify the requirements for plasticized and unplasticized nylon tubing for use primarily in the automobile industry.

It is being considered along with national drafts from other member countries by Technical Committee

TC 22/SC 2/WG 1, Pneumatic braking of vehicle

combinations — Compatibility between tractor and trailer, of the International Organization for Standardization (ISO) in the preparation of an international standard on this subject.

Part 1 of this standard specifies requirements for fully plasticized nylon tubing types 11 and 12 for use primarily in pneumatic installations.
