National foreword

This Part of BS 5793 has been prepared under the direction of the Industrial-process Measurement and Control Standards Committee. It is identical with IEC Publication 534-6 : 1985 'Industrial-process control valves. Part 6 : Mounting details for attachment of positioners to control valve actuators' published by the International Electrotechnical Commission (IEC).

Terminology and conventions. The text of the international standard has been approved as suitable for publication as a British Standard without deviation. Some terminology and certain conventions are not identical with those used in British Standards; attention is drawn especially to the following.

The comma has been used as a decimal marker in figures 3 to 6. In British Standards it is current practice to use a full point on the baseline.

Wherever page numbers are quoted, they are IEC page numbers.

The reference to 'other parts of IEC Publication 534' in clause 2 should be read as 'other Parts of BS 5793'.

Compliance with a British Standard does not of itself confer immunity from legal obligations.
