
British Standard Specification for

Servicing valves (copper alloy) for water services

Robinets d'entretien (en alliage de cuivre) pour circuits d'alimentation en eau domestique —
Spécifications

Wartungsarmaturen (aus Kupferlegierungen) für die Wasserversorgung

Foreword

This British Standard has been prepared under the direction of the Building Services Standards Committee, and covers the design, construction and testing of copper alloy servicing valves for water services.

Advice on the use of these valves will be found in BS 6700* and attention is drawn to the proposals for new model water byelaws.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

* In preparation.
