

Steel tubes for onshore and offshore water pipelines — Internal liquid applied epoxy linings for corrosion protection

The European Standard EN 10339:2007 has the status of a British Standard

ICS 23.040.99; 25.220.60

National foreword

This British Standard was published by BSI. It is the UK implementation of EN 10339:2007.

The UK participation in its preparation was entrusted to Technical Committee ISE/8, Steel pipes.

A list of organizations represented on ISE/8 can be obtained on request to its secretary.

Compliance with this Standard does not automatically imply a presumption that the product is suitable for the transport of water intended for human consumption, within the meaning of European Directive 89/106/EEC (also known as the Construction Products Directive). Until the proposed European Acceptance Scheme for construction products in contact with water intended for human consumption (or an alternative programme put forward by the European Commission) is in place, and this Standard revised to reflect this, products conforming to this Standard may be used in applications involving the transport of water for human consumption if they also conform to the relevant national, regional or local regulatory provisions applicable in the place of use.

In the UK, products and processes need to be approved by the Drinking Water Inspectorate (DWI). This involves obtaining approvals under regulation 31 for both the coating and the coating applicator. For more details please refer to <http://www.dwi.gov.uk/cpp/index.shtm>.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 30 March 2007
