

BS EN 1191:2012

BSI Standards Publication

Windows and doors — Resistance to repeated opening and closing — Test method

National foreword

This British Standard is the UK implementation of EN 1191:2012. It supersedes BS EN 1191:2000 which is withdrawn.

The UK participation in its preparation was entrusted by Technical Committee B/538, Doors, windows, shutters, hardware and curtain walling, to Subcommittee B/538/1, Windows and doors.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

BSI, as a member of CEN, is obliged to publish EN 1191 as a British Standard. However, attention is drawn to the fact that during the development of this European Standard, the UK committee voted against its approval as a European Standard.

The reason for this vote by the UK committee B/538, Doors, windows, shutters, hardware and curtain walling, is due to concerns regarding the Test order in clause H.4.1. It is not clear whether the door should be returned to the closed position (H.2.7), closed and fastened position (H.2.8) or closed, fastened and locked position (H.2.9) at the end of each cycle. Therefore, it is of the opinion of the UK committee that the relevant closed condition in the Test order in clause H.4.1 could be clarified.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
