Connector sets and interconnect components to be used in optical fibre communication systems - Product specifications

Part 14-1: Simplex and duplex cords made from simplex plugs with cylindrical ferrules, using EN 60793 2 50 single-mode B1 or B6 fibre for Category C according to EN 61753-1

National foreword

This British Standard is the UK implementation of EN 50377-14-1:2018. It supersedes BS EN 50377-14-1:2011, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee GEL/86/2, Fibre optic interconnecting devices and passive components.

A list of organizations represented on this committee can be obtained on request to its secretary.

BSI, as a member of CEN, is obliged to publish EN 50377-14-1:2018 as a British Standard. However, attention is drawn to the fact that during the development of this European Standard, the UK committee voted against its approval as a European Standard.

The UK committee rejected the final vote draft of EN 50377-14-1:2018 due to a number of technical errors in the testing section of the document where the conditions of the test did not match the standards quoted for the test. The tests concerned were: Test No. 6: Torsion; Test No. 7: Static side load; Test No. 8: Flexing strain relief of fibre optic devices; and Test No. 9: Ferrule compression force.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
