Fibre optic interconnecting devices and passive components — Basic test and measurement procedures

Part 2-52: Tests — Bending test for cords

National foreword

This British Standard is the UK implementation of EN 61300-2-52:2013. It is identical to IEC 61300-2-52:2013.

BSI, as a member of CEN, is obliged to publish EN 61300-2-52 as a British Standard. However, attention is drawn to the fact that during the development of this European Standard, the UK committee voted against its approval as a European Standard.

The committee noted a possible inconsistency between clause 3, which states that optical measurements should be made before and after the test, and clause 5.4, c) which states that optical measurements are also made during the test. The committee is also of the opinion that the mention of fibre, cable and resilient members being fixed together in clause 4.3 may not be appropriate for all fibre optic connectors.

The UK participation in its preparation was entrusted by Technical Committee GEL/86, Fibre optics, to Subcommittee GEL/86/2, Fibre optic interconnecting devices and passive components.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
