Annex B

Replace the existing Annex B, by the following:

Annex B (informative)

Non-linear encoding for scRGB : scRGB-nl and its YCC Transformation: scYCC-nl

B.1 General

This annex describes non-linear encoding for scRGB: scRGB-nl and its YCC transformation: scYCC-nl. Applications and hardware developers who want to support various colour compression schemes based on luma-chroma-chroma spaces can utilise this standard. This transformation is targeted for compression and storage, and is not targeted for displaying images.

B.2 Non-linear encoding in 12-bit

The relationship is defined as follows:

If $R_{\text{scRGB}}, G_{\text{scRGB}}, B_{\text{scRGB}} \geq 0,003\ 130\ 8$

$$\begin{aligned} R'_{\text{scRGB}} &= 1,055 \times R_{\text{scRGB}}^{(1,0/2,4)} - 0,055 \\ G'_{\text{scRGB}} &= 1,055 \times G_{\text{scRGB}}^{(1,0/2,4)} - 0,055 \\ B'_{\text{scRGB}} &= 1,055 \times B_{\text{scRGB}}^{(1,0/2,4)} - 0,055 \end{aligned} \quad (\text{B.1})$$

If $0,003\ 130\ 8 > R_{\text{scRGB}}, G_{\text{scRGB}}, B_{\text{scRGB}} > -0,003\ 130\ 8$

$$\begin{aligned} R'_{\text{scRGB}} &= 12,92 \times R_{\text{scRGB}} \\ G'_{\text{scRGB}} &= 12,92 \times G_{\text{scRGB}} \\ B'_{\text{scRGB}} &= 12,92 \times B_{\text{scRGB}} \end{aligned} \quad (\text{B.2})$$

If $R_{\text{scRGB}}, G_{\text{scRGB}}, B_{\text{scRGB}} \leq -0,003\ 130\ 8$

$$\begin{aligned} R'_{\text{scRGB}} &= -1,055 \times (-R_{\text{scRGB}})^{(1,0/2,4)} + 0,055 \\ G'_{\text{scRGB}} &= -1,055 \times (-G_{\text{scRGB}})^{(1,0/2,4)} + 0,055 \\ B'_{\text{scRGB}} &= -1,055 \times (-B_{\text{scRGB}})^{(1,0/2,4)} + 0,055 \end{aligned} \quad (\text{B.3})$$

12 bit non-linear version of scRGB-nl: $R_{\text{scRGB-nl}}, G_{\text{scRGB-nl}}, B_{\text{scRGB-nl}}$ is defined as:

$$\begin{aligned} R_{\text{scRGB-nl}} &= \text{round}(1\ 280 \times R'_{\text{scRGB}} + 1\ 024) \\ G_{\text{scRGB-nl}} &= \text{round}(1\ 280 \times G'_{\text{scRGB}} + 1\ 024) \\ B_{\text{scRGB-nl}} &= \text{round}(1\ 280 \times B'_{\text{scRGB}} + 1\ 024) \end{aligned} \quad (\text{B.4})$$
