Steel and iron — Determination of chromium content — Flame atomic absorption spectrometric method

*Aciers et fontes — Dosage du chrome — Méthode par spectrométrie
d'absorption atomique dans la flamme*

Reference number
ISO 10138:1991(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10138 was prepared by Technical Committee ISO/TC 17, *Steel*.

The publication of this International Standard gives rise to the cancellation of ISO 4936:1984.

Annex A forms an integral part of this International Standard. Annexes B and C are for information only.
