
**Plastics — Homopolymer and copolymer
resins of vinyl chloride —**

Part 1:
Designation system and basis for
specifications

*Plastiques — Résines d'homopolymères et de copolymères de chlorure de
vinyle —*

Partie 1: Système de désignation et base de spécification

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 1060-1 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 9, *Thermoplastic materials*.

This second edition cancels and replaces the first edition (ISO 1060-1:1982) and includes the following main changes:

- a) the viscosity and the type of rheological behaviour of standard pastes have been introduced as designatory properties for paste resins;
- b) retention on a 63 µm sieve has been introduced as a designatory property;
- c) plasticizer absorption has been introduced as a designatory property.

ISO 1060 consists of the following parts, under the general title *Plastics — Homopolymer and copolymer resins of vinyl chloride*:

- *Part 1: Designation system and basis for specifications*
- *Part 2: Preparation of test samples and determination of properties*
