Plastics — Smoke generation — Determination of the corrosivity of fire effluents —

Part 2: Static method

*Plastiques — Production de fumées — Détermination de la corrosivité des
effluents du feu*

Partie 2: Méthode statique

Reference number
ISO 11907-2:1995(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11907-2 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 4, *Burning behaviour*.

ISO 11907 consists of the following parts, under the general title *Plastics — Smoke generation — Determination of the corrosivity of fire effluents*:

- *Part 1: Guidance*
- *Part 2: Static test*
- *Part 3: Dynamic decomposition method using a travelling furnace*
- *Part 4: Dynamic decomposition method using a conical radiant heater*

At the time of publication of this part of ISO 11907, the other parts were at various stages of preparation.

Annexes A and B of this part of ISO 11907 are for information only.
