

INTERNATIONAL STANDARD

ISO
22

Second edition
1991-12-15

Belt drives — Flat transmission belts and corresponding pulleys — Dimensions and tolerances

*Transmissions par courroies — Courroies plates de transmission et
poulies correspondantes — Dimensions et tolérances*

Reference number
ISO 22:1991(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 22 was prepared by Technical Committee ISO/TC 41, *Pulleys and belts (including veebelts)*, Sub-Committee SC 1, *Veebelts and grooved pulleys*.

This second edition cancels and replaces the first edition (ISO 22:1975), together with ISO 63:1975, ISO 99:1975 and ISO 100:1984, of which it constitutes a technical revision.

Annexes A and B of this International Standard are for information only.
