Iron ores — Determination of aluminium content — Oxine gravimetric and titrimetric methods

Minerais de fer — Dosage de l'aluminium — Méthodes titrimétrique et gravimétrique à l'oxine

Second edition — 1980-10-15

UDC 553.31 : 543.21 + .24 : 546.621

Ref. No. ISO 2771-1980 (E)

Descriptors : metalliferous minerals, iron ores, chemical analysis, determination of content, aluminium, volumetric analysis, gravimetric analysis.

Price based on 7 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 2771 was developed by Technical Committee ISO/TC 102, *Iron ores*.

This second edition was submitted directly to the ISO Council, in accordance with clause 5.10.1 of part 1 of the Directives for the technical work of ISO. It cancels and replaces the first edition (i.e. ISO 2771-1973), which had been approved by the member bodies of the following countries :

Australia	Ireland	Spain
Belgium	Italy	Sweden
Canada	Japan	Thailand
Czechoslovakia	New Zealand	Turkey
Egypt, Arab Rep. of	Poland	United Kingdom
France	Portugal	USA
India	South Africa, Rep. of	USSR

The member body of the following country had expressed disapproval of the document on technical grounds :

Netherlands
