Metallic powders — Determination of apparent density — Part 2 : Scott volumeter method

Poudres métalliques — Détermination de la masse volumique apparente — Partie 2 : Méthode du volumètre de Scott

First edition — 1981-09-01

UDC 621.762 : 669-492.2 : 531.755

Ref. No. ISO 3923/2-1981 (E)

Descriptors : pulverulent products, metallic powder, tests, determination, density (mass/volume), funnels, sampling, volumetric analysis.

Price based on 4 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 3923/2 was developed by Technical Committee ISO/TC 119, *Powder metallurgy*, and was circulated to the member bodies in December 1979.

It has been approved by the member bodies of the following countries :

Austria	Germany, F. R.	Romania
Bulgaria	India	South Africa, Rep. of
Canada	Italy	Spain
China	Japan	Sweden
Czechoslovakia	Korea, Rep. of	United Kingdom
Egypt, Arab Rep. of	Norway	USA
France	Portugal	USSR

No member body expressed disapproval of the document.
