Hardmetals — Metallographic determination of porosity and uncombined carbon*Métaux-durs — Détermination métallographique de la porosité et du carbone non combiné***First edition — 1978-08-01****UDC 621.762 : 661.665.2 : 620.186****Ref. No. ISO 4505-1978 (E)****Descriptors :** hardmetals, metallography, microscopic analysis, porosity, carbon.

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4505 was developed by Technical Committee ISO/TC 119, *Powder metallurgical materials and products*, and was circulated to the member bodies in April 1977.

It has been approved by the member bodies of the following countries :

Australia	Ireland	Spain
Austria	Italy	Sweden
Bulgaria	Japan	Turkey
Canada	Mexico	United Kingdom
Chile	Poland	U.S.A.
Czechoslovakia	Portugal	U.S.S.R.
France	Romania	Yugoslavia
Germany	South Africa, Rep. of	

No member body expressed disapproval of the document.
