Rubber, vulcanized or thermoplastic — Preparation of samples and test pieces —

Part 1: Physical tests

*Caoutchouc vulcanisé ou thermoplastique — Préparation des échantillons
et éprouvettes —*

Partie 1: Essais physiques

Reference number
ISO 4661-1:1993(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4661-1 was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Sub-Committee SC 2, *Physical and degradation tests*.

This second edition cancels and replaces the first edition (ISO 4661-1:1986), of which it constitutes a minor editorial revision.

ISO 4661 consists of the following parts, under the general title *Rubber, vulcanized or thermoplastic — Preparation of samples and test pieces*:

- Part 1: *Physical tests*
- Part 2: *Chemical tests*
