

INTERNATIONAL STANDARD

**ISO
6773**

Second edition
1994-10-01

Aerospace — Fluid systems — Thermal shock testing of piping and fittings

*Aéronautique et espace — Systèmes de fluides — Essai de choc
thermique des tuyauteries et raccords*

Reference number
ISO 6773 1994(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 6773 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 10, *Aerospace fluid systems and components*.

This second edition cancels and replaces the first edition (ISO 6773:1982), the figure of which has been technically revised and the text clarified in places.
