Phosphoric acid for industrial use (including foodstuffs) — Determination of hydrogen sulfide content — Titrimetric method

Acide phosphorique à usage industriel (y compris les industries alimentaires) — Dosage du sulfure d'hydrogène — Méthode titrimétrique.

First edition — 1983-10-15

UDC 661.634 : 543.24 : 546.211.1

Ref. No. ISO 7099-1983 (E)

Descriptors : industrial products, phosphorus inorganic compounds, phosphoric acids, chemical analysis, determination of content, hydrogen sulfide, volumetric analysis.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 7099 was developed by Technical Committee ISO/TC 47, *Chemistry*, and was circulated to the member bodies in May 1982.

It has been approved by the member bodies of the following countries :

Austria	Hungary	Portugal
Belgium	India	Romania
China	Italy	South Africa, Rep. of
Czechoslovakia	Korea, Dem. P. Rep. of	Sri Lanka
Egypt, Arab Rep. of	Korea, Rep. of	Thailand
France	Netherlands	USSR
Germany, F. R.	Poland	

The member body of the following country expressed disapproval of the document on technical grounds :

Australia
