7228**

Third edition
1993-10-15

Tracheal tube connectors

Raccords de tubes trachéaux

Reference number
ISO 7228:1993(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7228 was prepared by Technical Committee ISO/TC 121, *Anaesthetic and respiratory equipment*, Sub-Committee SC 2, *Tracheal tubes and other equipment*.

This third edition cancels and replaces the second edition (ISO 7228:1985), and introduces revised requirements for the internal cross-sectional area of connectors. Requirements concerning the female 22 mm conical connector are no longer given.

Annex A of this International Standard is for information only.
