
**Road vehicles — Coiled tube assemblies
for air brake connection between towing
and towed vehicles —**

Part 2:
Performance requirements

*Véhicules routiers — Tuyaux flexibles spiralés munis de leurs raccords pour
liaison de freinage pneumatique entre le véhicule tracteur et un véhicule
tracté —*

Partie 2: Exigences de performances

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7375-2 was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 2, *Brake systems and equipment*.

ISO 7375 consists of the following parts, under the general title *Road vehicles — Coiled tube assemblies for air brake connection between towing and towed vehicles*:

- *Part 1: Dimensions*
- *Part 2: Performance requirements*

Annex A forms an integral part of this part of ISO 7375.
