Irrigation equipment — Rotating sprinklers — **Part 2:** Uniformity of distribution and test methods

Matériel d'irrigation — Asperseurs rotatifs —
Partie 2: Uniformité de la distribution et méthodes d'essai

Reference number
ISO 7749-2 : 1990 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7749-2 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*.

ISO 7749 consists of the following parts, under the general title *Irrigation equipment — Rotating sprinklers*:

- *Part 1: Design and operational requirements*
- *Part 2: Uniformity of distribution and test methods*

Annex A forms an integral part of this part of ISO 7749.
