Aerospace process — Anodic treatment of aluminium alloys — Chromic acid process 20 V DC, undyed coating

Procédés de traitement dans l'industrie aéronautique — Traitement anodique des alliages d'aluminium — Traitement à l'acide chromique sous courant continu de 20 V pour revêtement non teinté

First edition — 1984-10-15

UDC 669.716.9 : 629.7

Ref. No. ISO 8077-1984 (E)

Descriptors : aircraft industry, aluminium alloys, anodizing, anodic coating, specifications, quality assurance, tests, packing, chromic acid.

Price based on 3 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8077 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*.
