Propylene for industrial use — Determination of oligomers — Gas chromatographic method

Propylène à usage industriel — Dosage des oligomères — Méthode par chromatographie en phase gazeuse

First edition — 1986-07-01

UDC 661.715.3 : 543.544

Ref. No. ISO 8175-1986 (E)

Descriptors : industrial products, propylene, chemical analysis, determination of content, oligomers, gas chromatography.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8175 was prepared by Technical Committee ISO/TC 47, *Chemistry*.

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.
