
**Abrasive grains — Determination of bulk
density —**

**Part 2:
Microgrits**

*Grains abrasifs — Détermination de la masse volumique apparente —
Partie 2: Micrograins*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9136-2 was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 5, *Grinding wheels and abrasives*.

ISO 9136 consists of the following parts, under the general title *Abrasive grains — Determination of bulk density*:

- *Part 1: Macrogrits* [Currently ISO 9136:1989]
- *Part 2: Microgrits*
