
**Numerically controlled draughting
machines — Draughting test for evaluation
of performance —**

Part 2:
Monochrome raster plotters

*Machines à dessiner à commande numérique — Essai de traçage pour
l'évaluation des performances —*

Partie 2: Traceurs à quadrillages monochromes

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9959-2 was prepared by Technical Committee ISO/TC 10, *Technical drawings, product definition and related documentation*, Subcommittee SC 9, *Media and equipment for drawing and related documentation*.

ISO 9959 consists of the following parts, under the general title *Numerically controlled draughting machines — Draughting test for evaluation of performance*:

- *Part 1: Vector plotters*
- *Part 2: Monochrome raster plotters*

Annex A of this part of ISO 9959 is for information only.
